Dear Health Care Provider:

Re: Revised HIV/HBV/HCV Post-Exposure Prophylaxis Protocol and HIV Starter Kits

Please be advised that Manitoba Health, Seniors and Active Living (MHSAL) has released today a new, updated **Post-exposure Prophylaxis for HIV, HBV and HCV: Integrated Protocol for Managing Exposures to Blood and Body Fluids in Manitoba** (www.gov.mb.ca/health/publichealth/cdc/protocol/pep.html).

This new protocol follows the current best practice of giving three antiretroviral (ARV) drugs at all times (that is, no more risk stratification), where HIV post-exposure prophylaxis (PEP) is indicated. It also adopts use of the more tolerable ARV drugs tenofovir, emtricitabine and raltegravir, where appropriate.

In line with this protocol change, MHSAL has changed its HIV PEP starter kits to contain various combinations of the following drugs, depending on client age, weight and renal status:

- Truvada® or generic equivalent (emtricitabine combined with tenofovir)
- 3TC® (lamivudine)
- Combivir® (lamivudine combined with zidovudine)
- Retrovir® (zidovudine)
- Isentress® (raltegravir)
- Kaletra® (lopinavir-ritonavir)

The new kits contain enough supply for **three days** of PEP. If PEP is to be continued for the full 28-day course, the additional drug supply over those provided in the starter kit shall be prescribed by the follow-up care provider, who may use for this purpose the preprinted form inserted in the kits and also available for download at www.gov.mb.ca/health/publichealth/cdc/protocol/hiv_prescription.pdf. Please instruct clients to bring this form to their follow-up care provider in case it is needed.

The revised **HIV Post-exposure Prophylaxis Drug Order Form** is available at (http://www.gov.mb.ca/health/publichealth/cdc/protocol/hiv_drugorder.pdf) *NOTE: If any orders are placed on or after October 24, 2018, using the old order form, you will be asked to resubmit using the new form. To avoid delays, please use the new order form.*

Once providers receive the new kits, they are expected to dispose of the old, discontinued ones in an appropriate biologics container.

Sincerely,

Richard Baydack, PhD
Director
